

## **ABSTRACT OF THE DISCLOSURE**

The disposable bag is comprised of at least one layer of air permeable and flexible thin material at each portion of the said bag. The air permeability of some portions of the bag is in the range of  $300 \text{ ft}^3/\text{ft}^2/\text{min}$  to  $1500 \text{ ft}^3/\text{ft}^2/\text{min}$ . The lawn debris, leaves, and particulate matters are blown into the said disposable bag by a powered machine. The said bag provides a convenient means of effective collection of the debris, leaves, and particulate matters with easy air ventilation.
